Cybersecurity protects computers, networks, applications, and data from unauthorized access, misuse, disruption, or destruction.

CIA Triad

Confidentiality: Access is limited to authorized users.

Integrity: Data remains accurate and protected from unauthorized changes.

Availability: Systems and information are accessible when needed.

Common Threats

Phishing, malware, weak passwords, unauthorized access, data breaches, and denial-of-service attacks.

Protection Practices

Use strong unique passwords, enable multi-factor authentication, keep software updated, verify suspicious links and messages, back up important data, and apply appropriate access controls.

Incident Response
